

## **Product sheet**

The light stick for signallers is designed to increase the visibility of construction site signallers. Since standard flags are much less visible at night, the light produced by the light stick ensures that the signs are effectively perceived by all road users. Economically designed with a translucent red PVC tube containing six brightly lit LEDs and an ABS plastic handle to withstand repeated use and the harshest of elements. Powered by two D-cell batteries, the light stick for signallers offers three distinct lighting modes: flashing, continuous and "flashlight" at the tip.

Technical Informations	
Product N°:	BLS-540
Dimensions Overall Length: Usable Length: Diameter: Weight:	545 mm (21,47") 337 mm (13,25") 40 mm (1,57") 0,45 kg (1 lbs.)
Materials	
Light stick: Handle:	Transuscent PVC ABS Plastic
Available Colours:	
Light stick:	Red
Handle:	Black
LEDs:	Red
Flashlight:	White

- High visibility
- Three lighting modes
- Powered by 2 D-cell batteries (not included)
